Introduction

What is Network Identity?

It is the set of attributes that describe profiles of an individual in the Internet.

like:

Email address, customer name, PIN,
credit card number, social security number, Passport,
even DNA, Retinal Scan

HELSINKI UNIVERSITY OF TECHNOLOGY
Networking Laboratory

Formal Definition

by *Sun Microsystems*

Network Identity (NI) is the context-sensitive identity, attributes, rights, and entitlements, all maintained within a policy-based trusted network framework.

Networking Laboratory

Network Identity Drivers

- Financial
- Compliance and Legislation
- Trust and Privacy
- Security
- Technology

Basic Network Identity Services

Protocol	Objective	Interfaces	Functionality
DNS	Domain names	IP address	naming service
DHCP	MAC address	IP address	IP network connectivity
LDAP	User identity	Policies	Enforcement of access rights
PKI	User name	Public key	Encryption/Decryption for data security and session verification
RADIUS	User	User attributes and access rights	Control over authorized use of network resources

Network Identity Roadmap

Microsoft's .Net Passport

Microsoft's .Net Passport is a "universal-login" service launched since July 1999 that allows users to log in to many websites using one account. It is a key part of Microsoft's .Net strategy.

Microsoft's NET Passport has more than 200 million active accounts and handles more than 4 billion authentications per month.

Networking Laboratory

Membership categories

Over 150 diverse member companies and organizations nowadays including:

- q Government organizations
The U.S. General Services Administration,
and the U.S. Department of Defense
- q End-user companies
- q System integrators
- q Software and hardware vendors

Status in Finland

NOKIA
CONNECTING PEOPLE

 **SETEC**

HELSINKI UNIVERSITY OF TECHNOLOGY
Networking Laboratory

Network ID Product pioneer SETEC

Famous for it's smart cards

- § In 2000 the world's first payment card based on EMV&PKI technology
- § In 1999 developed the world's first, PKI SIM card
- § In 1998 launched SIM card with a Wireless Internet Browser.
- § In 1995 first in the world to develop a PKI smart card with 1024-bit keys.

HELSINKI UNIVERSITY OF TECHNOLOGY
Networking Laboratory

World Telecommunications leader NOKIA

- § June 2004 **Nokia** and Sun Microsystems co-published a new white paper “Deploying Mobile Web Services using Liberty Alliance’s Identity Web Services Framework (ID-WSF) ”
- § One of the ten member companies offer Liberty Alliance interoperable products (passed the conformance tests)
- § In Sept 2001 **Nokia** was one of the founders of the **Liberty Alliance**, board member and key impetus
