

# Information and Communications Technology for Railway Traffic between Europe and China

Master's Thesis Presentation, 16th January 2007

**Author: Juan Li**

**Supervisor: Professor Raimo Kantola**

**Instructor: M.Sc. Mikko Haapanen**

# Agenda (1/2)

- ❖ Background
- ❖ Objectives
- ❖ Methodologies
- ❖ Innorail Express
- ❖ Main Challenges

# Agenda (2/2)

- ❖ Implementation business network
- ❖ Information and Communications Technology (ICT) solutions for Innorail Express
- ❖ Conclusions
- ❖ Future work

# Background

- ❖ Kouvola is a leading railway city located in the south-eastern part of Finland as well as in the border area of EU and Russia.
- ❖ Kouvola aspires to be a safe and leading international railway business and know-how center by 2010\*.
- ❖ Innorail Kouvola Oy is promoting a new railway traffic service between Kouvola, Finland and Tianjin, China, i.e. Innorail Express.

\* Reference: <http://www.innorailkouvola.fi/en/innorail/vision>

# Objectives

- ❖ To survey the current situations in railway transport between Finland and China, as well as the most popular ICTs in railway transport.
- ❖ To tailor reasonable and available solutions, which especially focus on ICT area, to meet the challenges of Innorail Express project.

# Methodologies

- ❖ Literature study on current situation of railway transport between Finland and China as well as ICT knowledge.
- ❖ Interviewed with railway companies, forwarders and shippers of Finland, China and Russia.
- ❖ Case study on Innorail Express

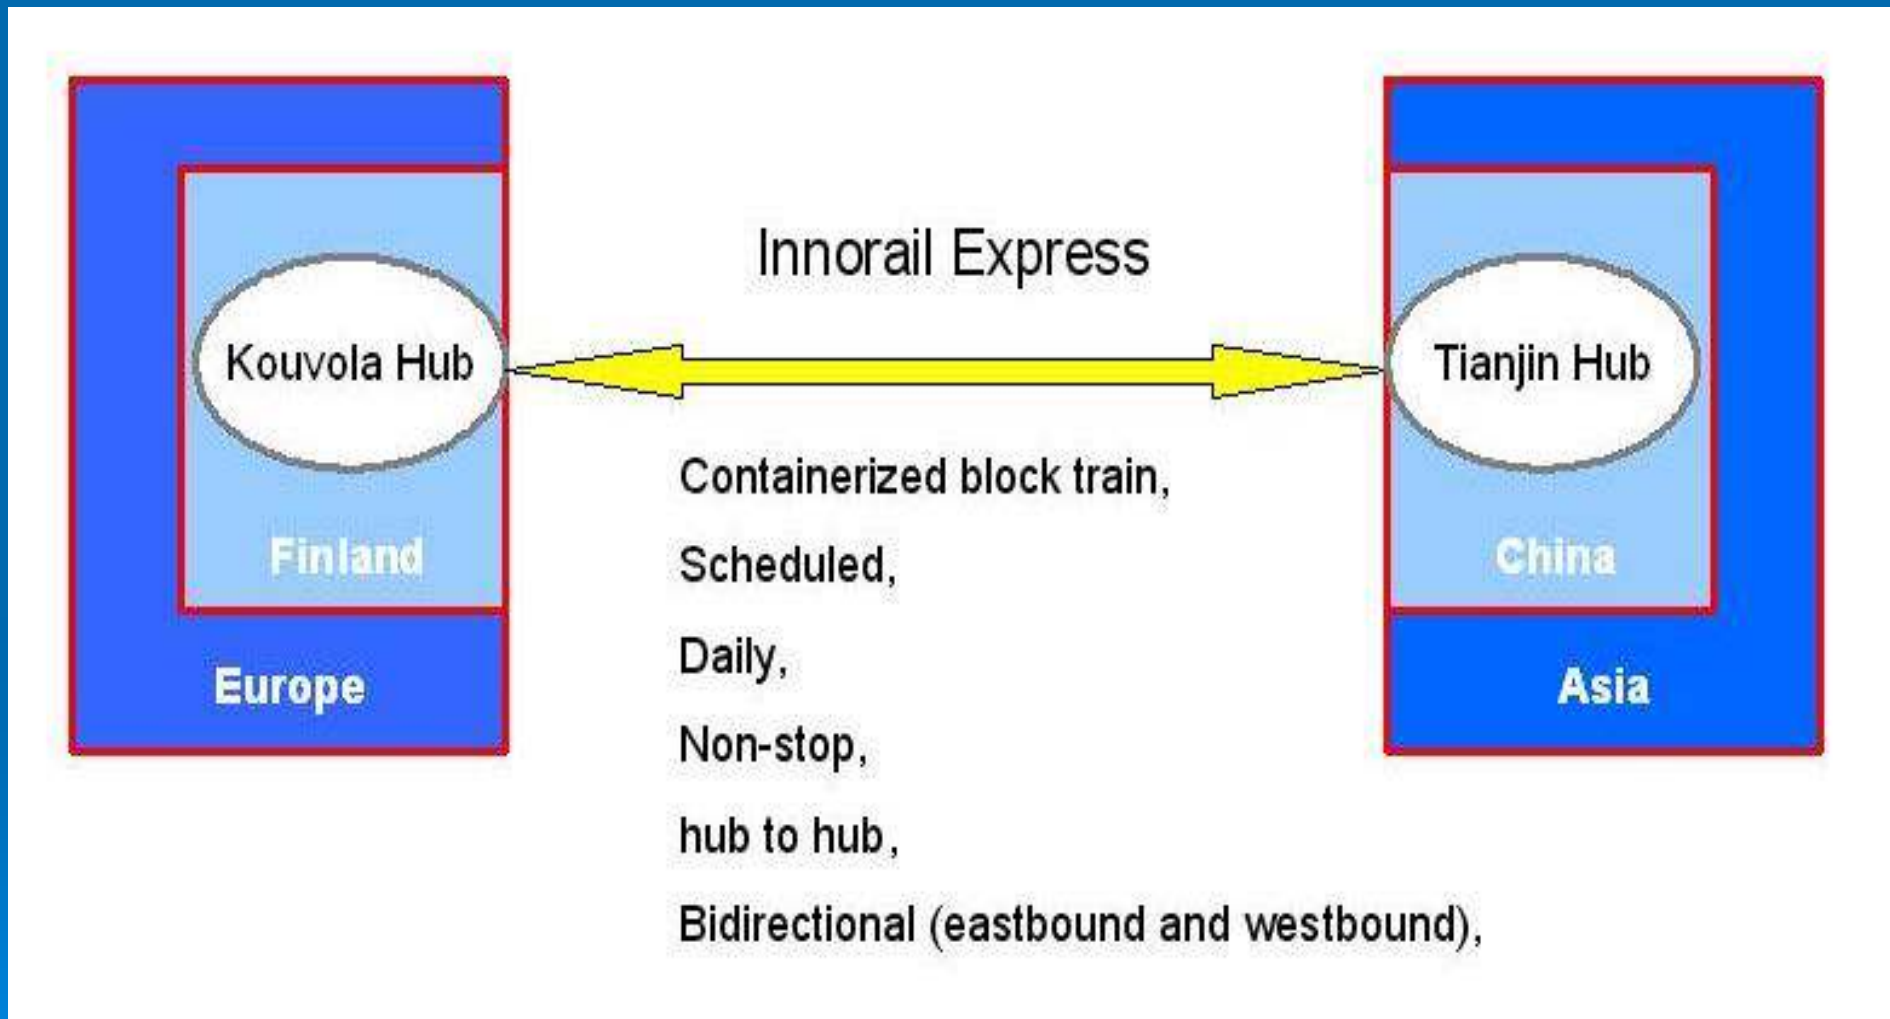

# Innorail Express

## ❖ Service concept

Innorail Express is an International Transit Railway Transport (ITRT), which is scheduled, daily, bidirectional (eastbound and westbound), non-stop, container block train service between hub Kouvola and hub Tianjin (hub to hub) through Russia\*. It mainly makes use of the Siberian Land Bridge (SLB) and the Trans-Manchurian railway.

# Innorail Express

# Innorail Express

## ❖ Innorail Express Route

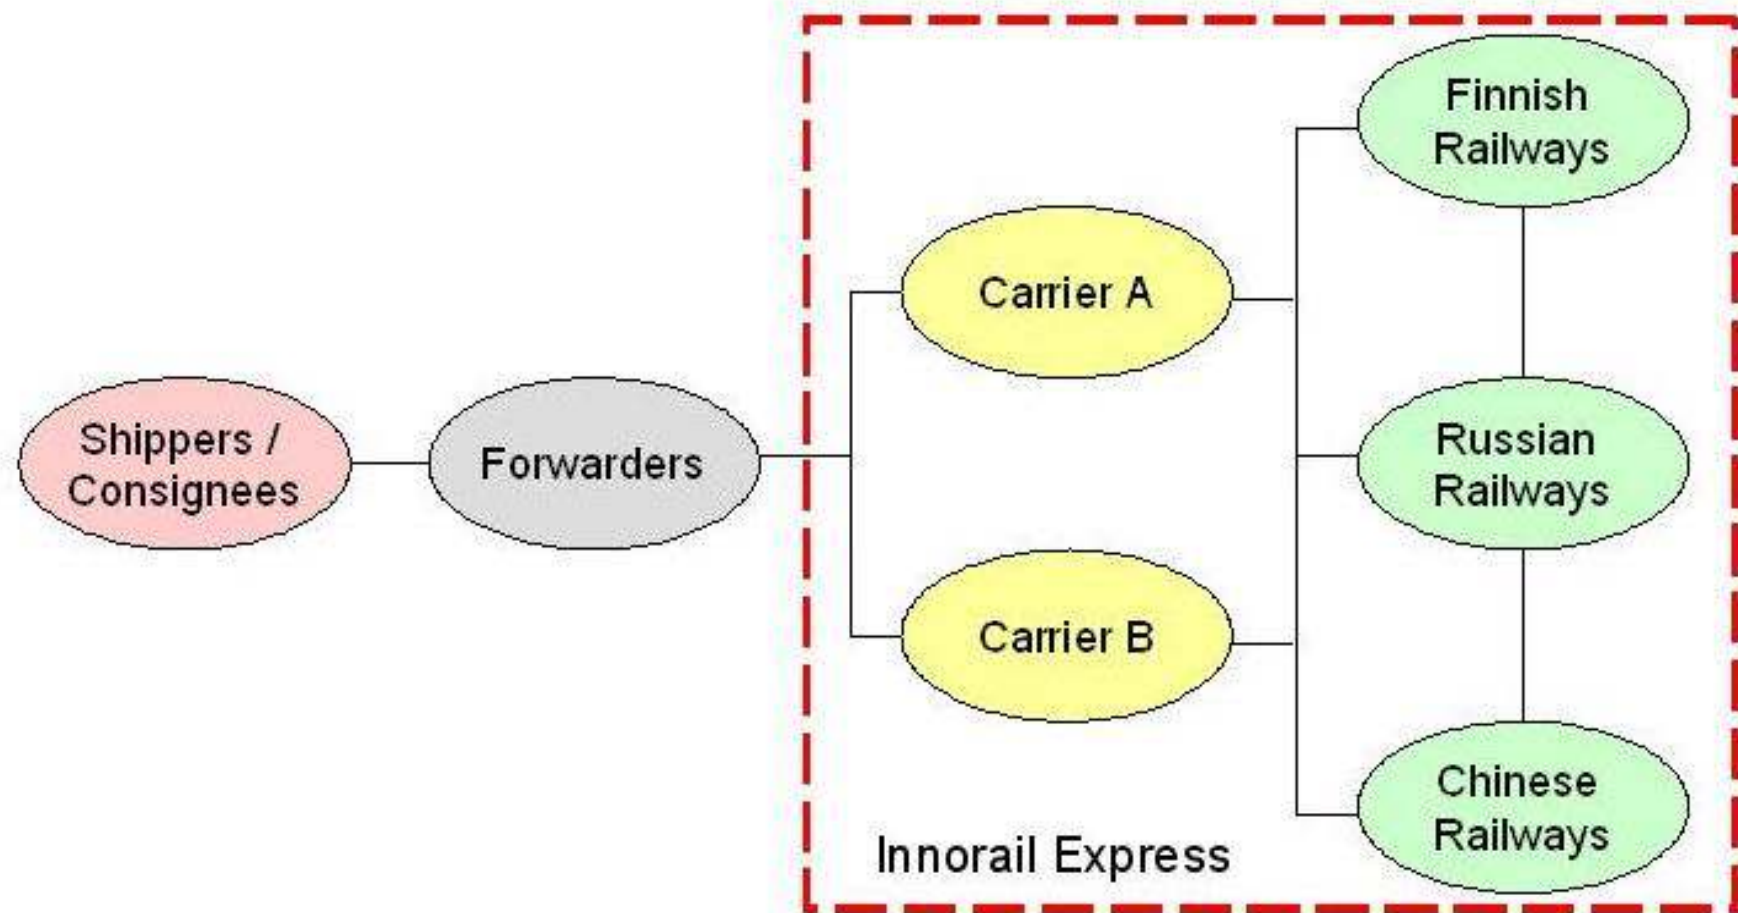

# Main Challenges

- ❖ A suitable implementation business network
- ❖ An integrated information system
- ❖ Exercisable document flows
- ❖ Security issues

# Implementation business network

## Innorail Express Conference

# ICT solutions for Innorail Express

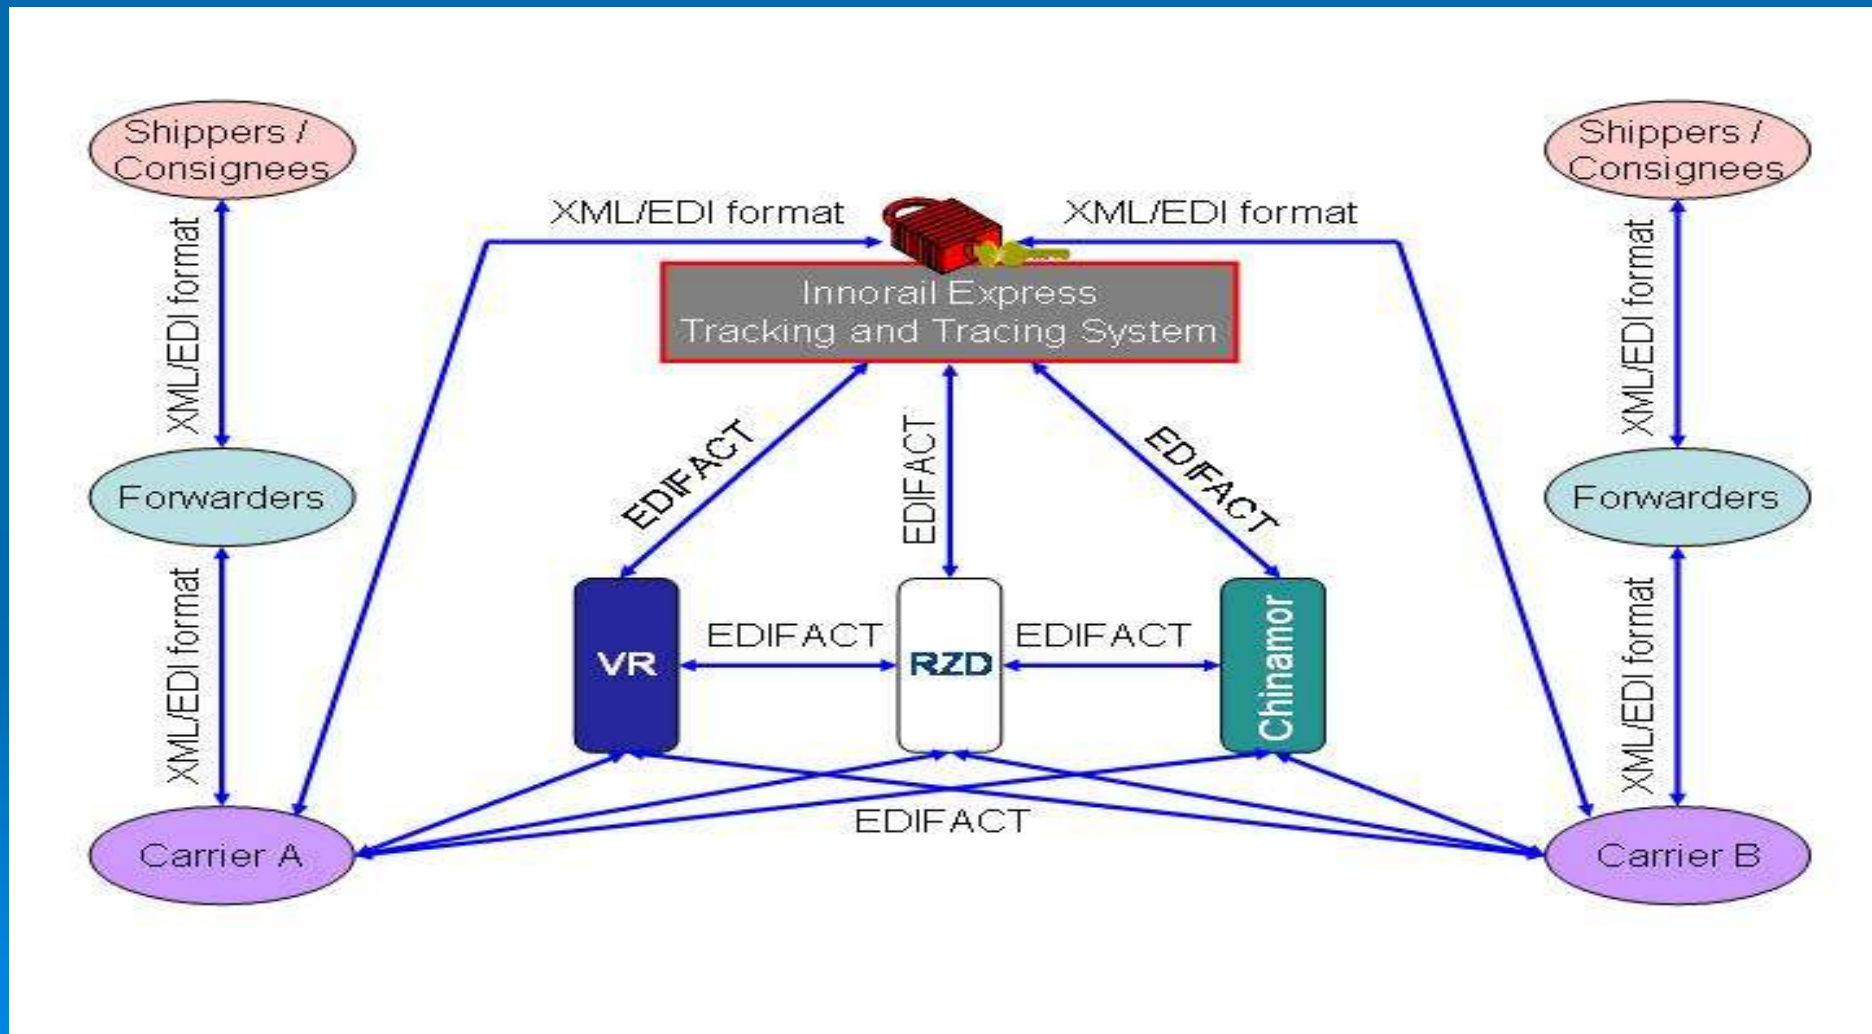

- ❖ Message formats in the integrated information system

- EDIFACT = Electronic Data Interchange For Administration Commerce and Transport

- XML/EDI = eXtensible Markup Language/EDI

# ICT solutions for Innorail Express

## ❖ Integrated information system

# ICT solutions for Innorail Express

## ❖ Exercisable Document Flows

The traditional paper document process is time-consuming. It is necessary to introduce electronic document flow according to **eastbound\*** and **westbound\*** transport of Innorail Express.

\* Eastbound and westbound document flows are in Appendix A and B respectively.

# ICT solutions for Innorail Express

## ❖ Security issues

- RFID = Radio Frequency Identification  
Attaching RFID tags into or onto cargos

- Bar code

- Tracking and tracing system

The respective control or monitoring systems of Finnish, Russian and Chinese railways are utilized to provide wagon and container tracking and tracing services to Innorail Express. Each control system collects exact data and then integrates real-time data to the database of Innorail Express Tracking and Tracing System.

# Conclusions

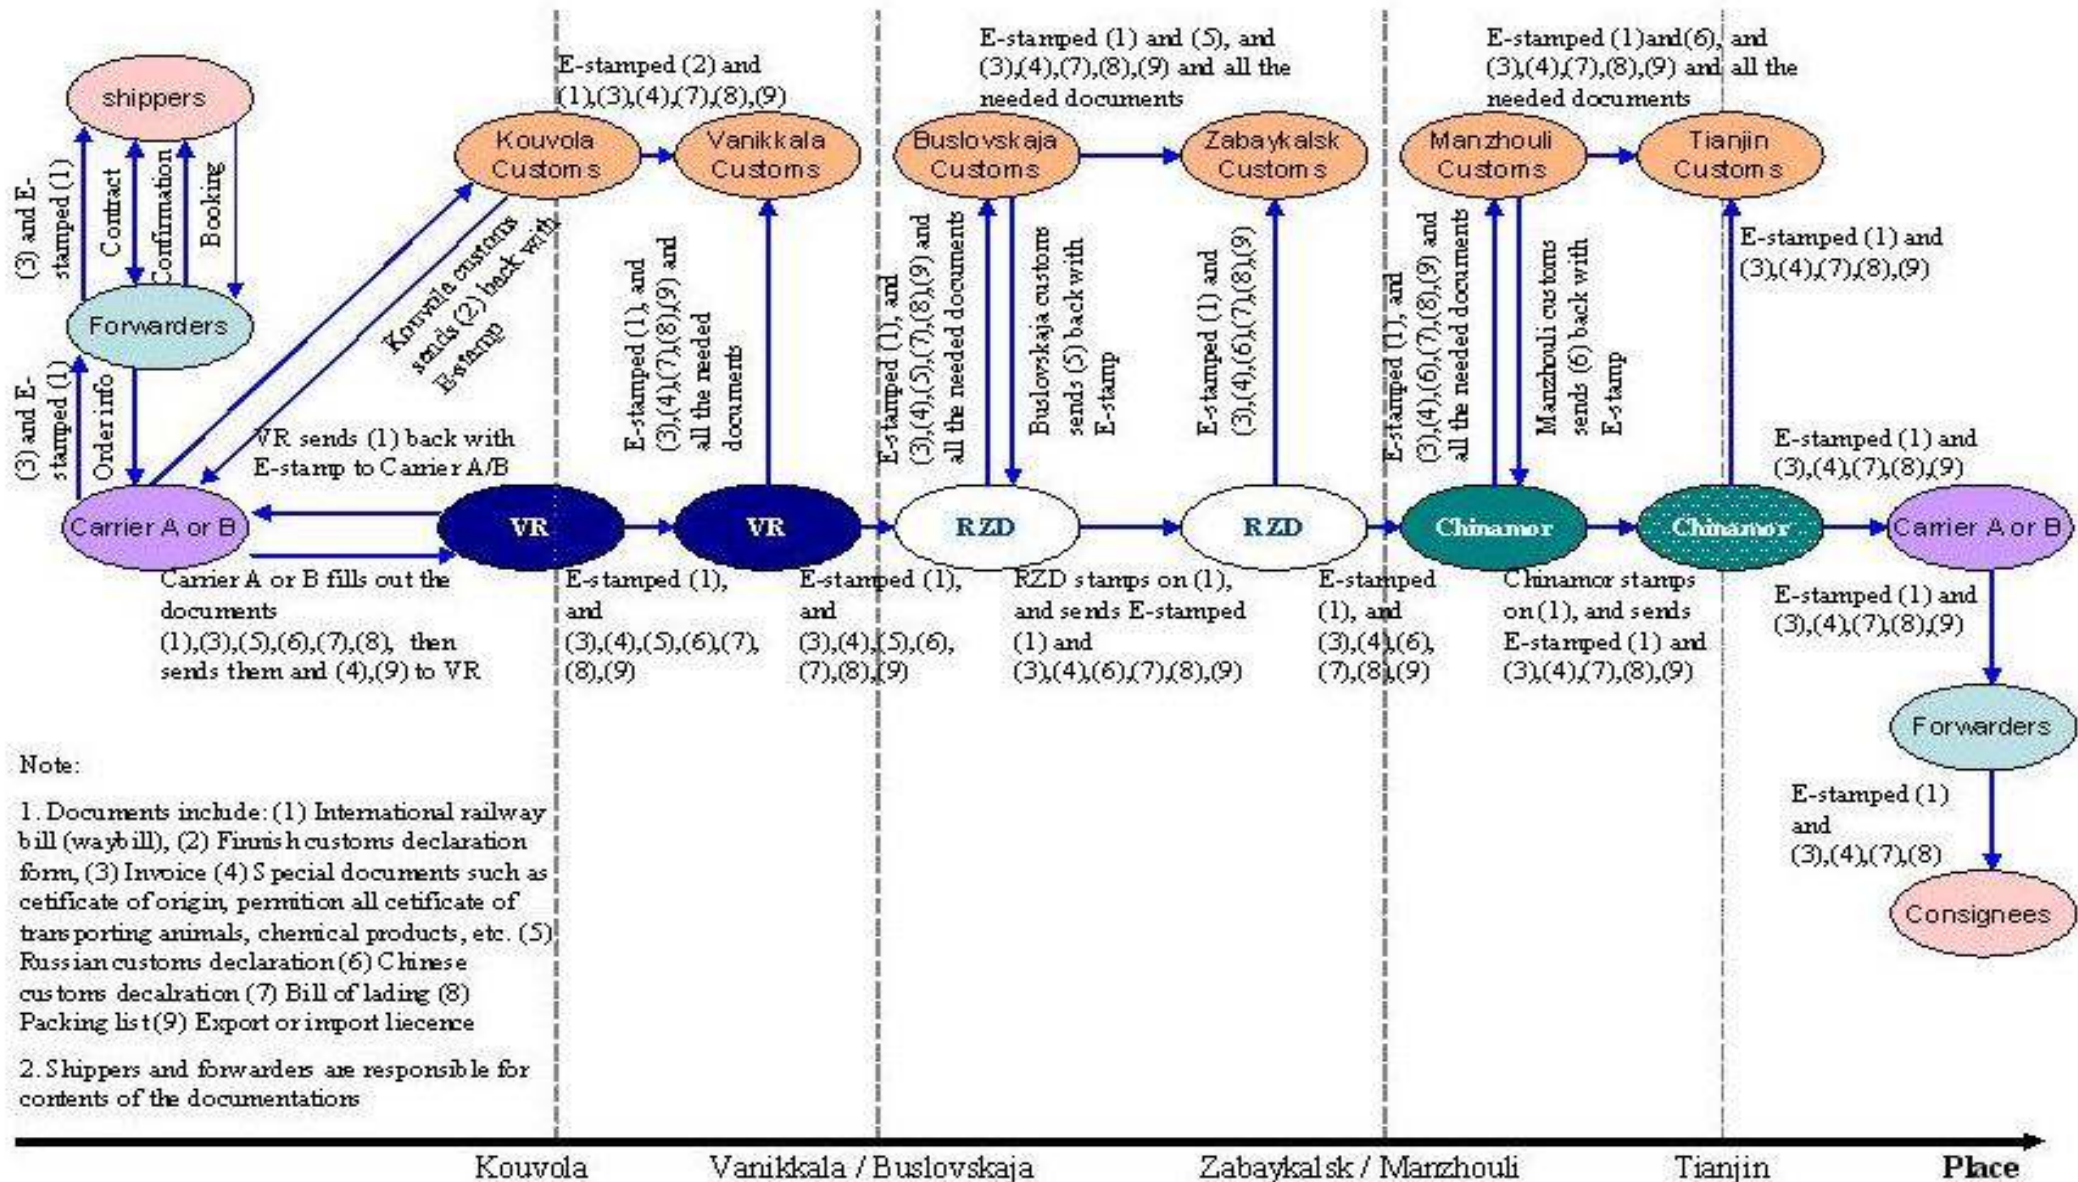

- ❖ Railway traffic and ICT
- ❖ All the ICT solutions in my thesis are able to be implemented for Innorail Express project immediately.
- ❖ The whole communication network works quite well in academic analysis as well as practical document flow management and security solutions on cargos, containers and wagons.

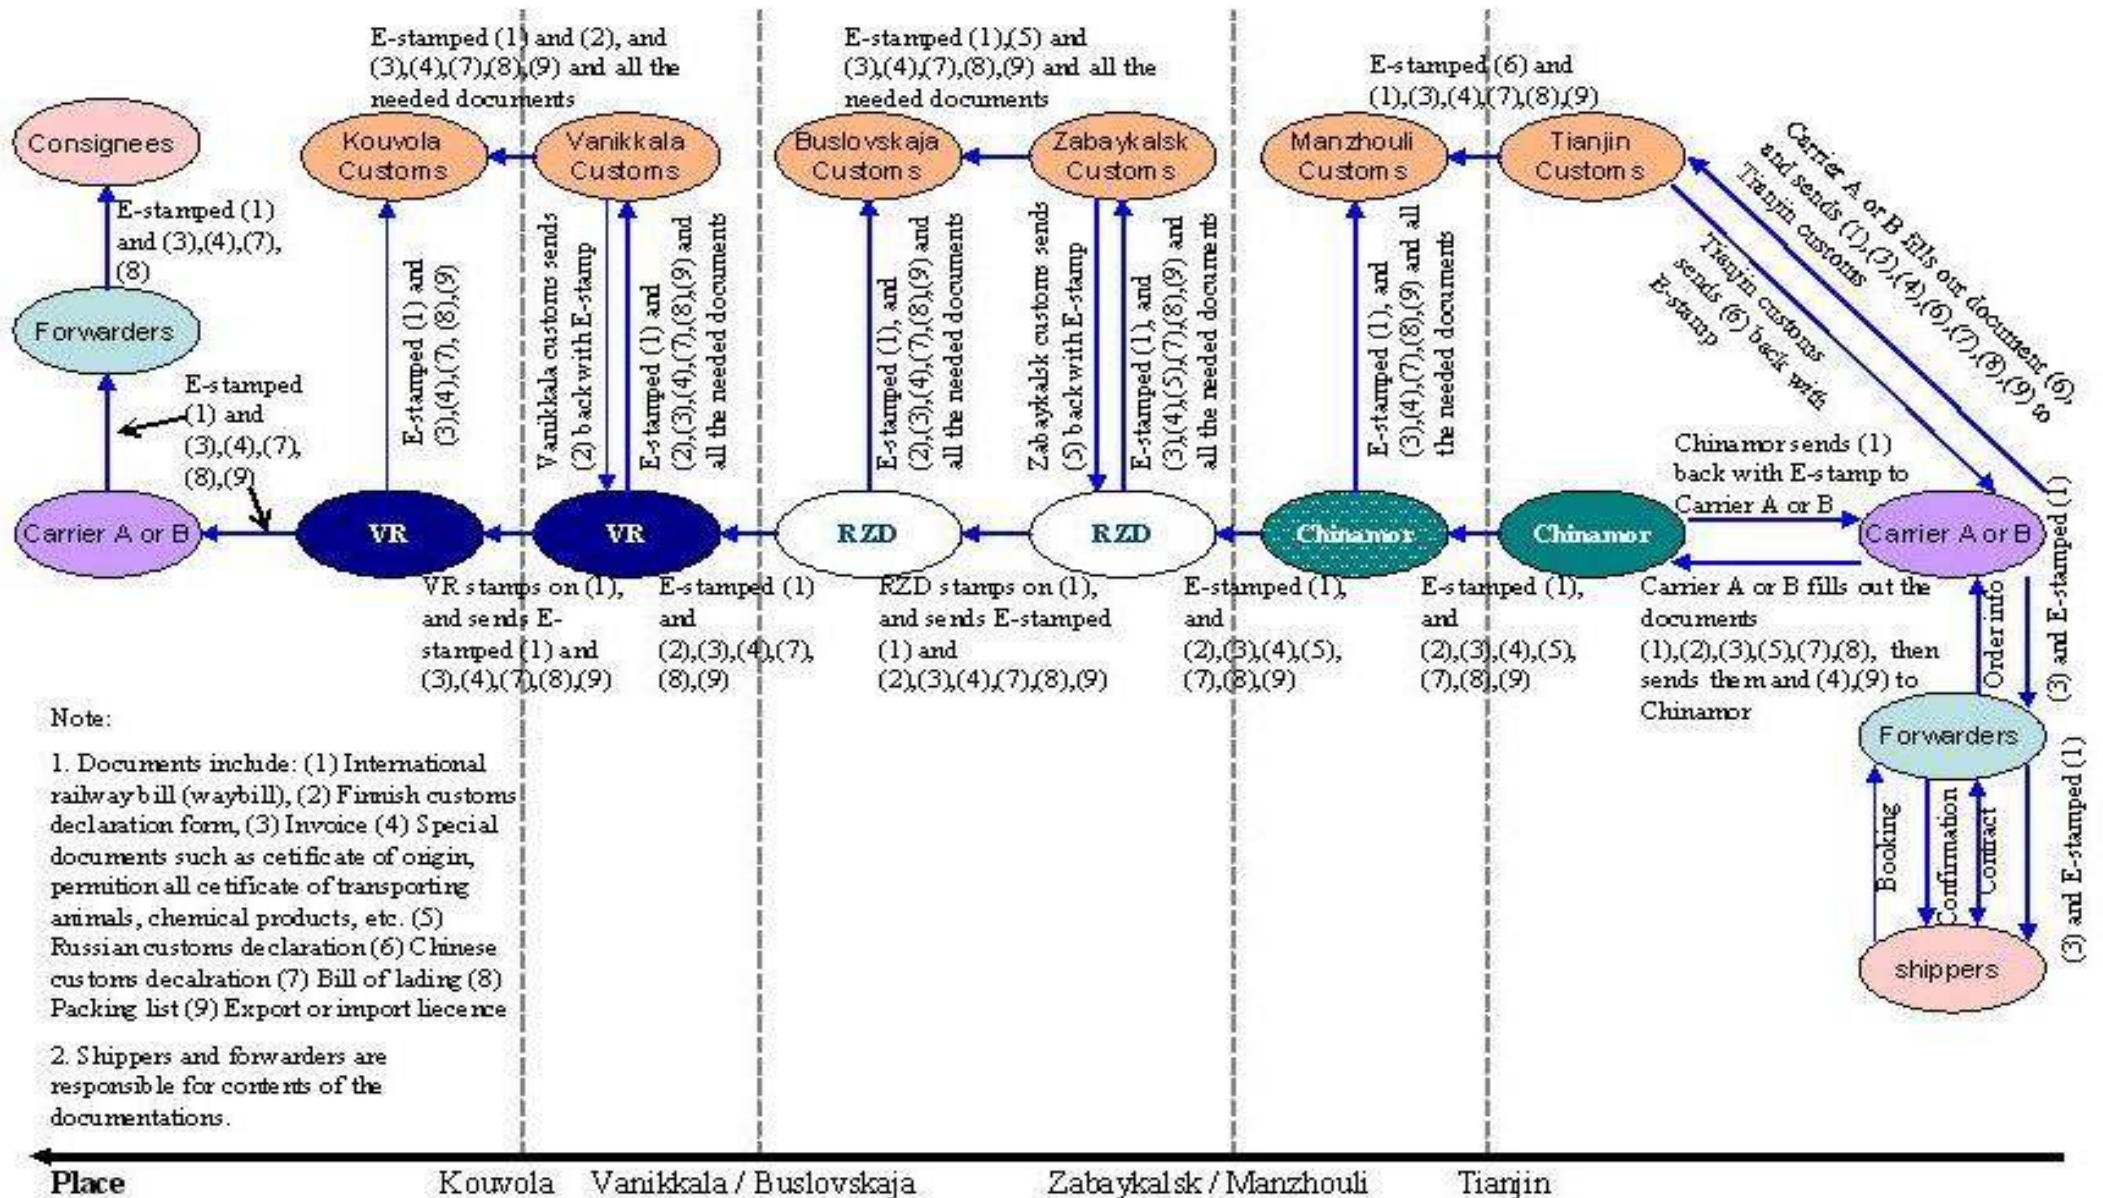

# Future work

- ❖ To continue the current work to make an intensive research on the ICT solutions
- ❖ To update the current ICT solutions and bring forward better solutions.
- ❖ To extend the ICT solutions to other projects such as Innorail Express Korea and Innorail Express Japan.

# Appendix A - Document Flow in Eastbound Transport

# Appendix B - Document Flow in Westbound Transport

Thank you!
